

Now is the time to test your cards

The use of cards is becoming more common in everyday life – SIM cards, identification cards, access control cards, credit cards, you name it. This makes testing absolutely integral to ensure that the cards are durable and resilient, so that they can perform optimally.

The Plastic and Composite Materials Section at SIRIM QAS has the experience and the expertise to test card quality, reliability and durability for local and international clients. Not to mention, we are accredited and recognised as an International Test House by the Department of Standards Malaysia.

We provide a host of testing services which include peel strength, dynamic bending and torsion, resistance to temperature & humidity, chemical resistance, UV light resistance, mechanical strength (3-Wheel test) and many more.

Build your credibility as a card manufacturer today. Ensure that quality is on the “cards” with SIRIM QAS.
