ENERGY
MANAGEMENT SYSTEM

Take Control of Your Energy Performance

Improve bottom line by reducing energy costs and improve processes. Efficient use of energy in day-to-day business operations contributes to cost efficiencies and opens doors to new business opportunities. As the only certification body accredited by the Department of Standards Malaysia and the International Certification Network (IQNet) for ISO 50001 Energy Management System, SIRIM QAS is the ideal partner for organisations that wish to achieve energy efficiency and carbon reduction targets.

The Efficient Way Forward – ISO 50001 Energy Management Systems

ENERGY
SYSTEM

SIRIM

ISO 50001 is a standard that defines requirements for developing and maintaining an energy management system, applicable for organisations of any size or type, and irrespective of the type and quantity of energy consumed.

It enables organisations to continually improve their energy performance, including energy efficiency, use and consumption. The standard also provides a framework to effectively measure results based on energy targets set by respective companies.

With growing concerns over climate change, businesses are expected to play an active role in the drive towards sustainability. Forward-looking organisations realise the importance of the efficient use of energy in contributing to the bottom line.
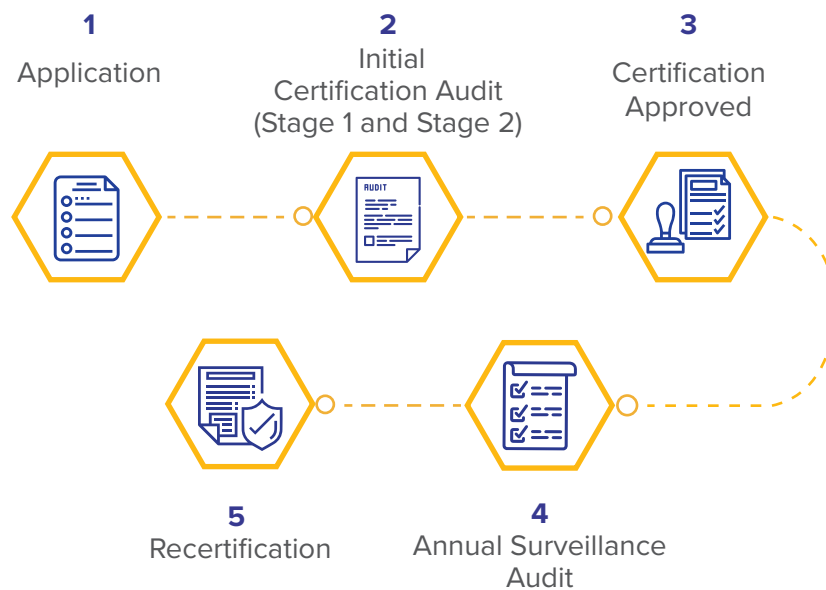

Companies can effectively save on energy costs and improve their energy performance through efficient energy management as they are led by strong commitment from the top management to achieve continual improvement.

In addition, the use of the High Level Structure framework ensures compatibility with other relevant ISO management systems such as ISO 9001 and ISO 14001, minimising disruptions to business operations and saving costs from multiple audits.

Why Get Certified

- Showcase commitment to continually improve energy management based on international standards.
- Seamless integration of standard requirements with overall business processes, improving workflow and productivity.
- Provide credibility to energy performance results disclosed to stakeholders.
- Achieve long-term operational efficiency and financial sustainability through effective use of resources.
- Boost reputation as a socially responsible corporate citizen.
- Gain access to wider markets with stringent regulatory requirements in relation to energy efficiency.
